### Rolling Gate VS. Swinging Gate:

A rolling gate -- one that is say 10' or 12' wide and rolls along a parallel fence -- is totally supported by the fence.

A swinging gate relies on the post to support it. The post has to be substantial enough to bear the load.

The hardware for a rolling gate is going to cost more, but the gate will usually last longer and require less maintenance.

If you're planning on using a wheel for support/movement - my experience with a wheel was that it contained two main issues:

- got stuck on/in something in its path; and/or
- got a case of "shopping cart-itis" - that is, the wheel would have its own ideas as to which way it was going.
